

SEED

Many leaves have grown on the plant, and it has grown tall, strong and sturdy.

YOUNG PLANT

The small, dry part of a plant that grows into new plant when given light and water.

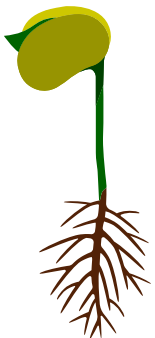

GERMINATION

A flower bud has formed on the plant. The plant roots are stretching down deep to find enough water for the flower to open and grow.

BUDDLING FLOWER

The first part of root to come out of the seed. It grows down into soil.

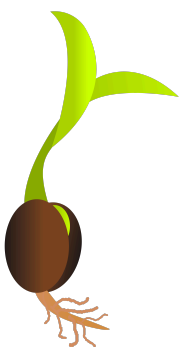

SPROUT

The plant has grown big and the flower is fully opened. The plant is no longer growing once it becomes fully grown

ADULT PLANT

The first small shoot of green that comes out of the ground, into the light. It still has seed shell attached.

SEEDLING

The plant begins to wilt and dry out. Once the plant has dried out, the seeds will drop and the cycle will start all over again.

DYING PLANT

Leaves start to form on the plant and the seed shell has fallen off.
